

## **Goodbye, Wellcentive. Welcome, HealthEC!**

Beaumont ACO is updating its Analytics and Patient Registry Strategy with the implementation of a new technology, HealthEC.

The Beaumont ACO has historically utilized Wellcentive, a patient disease registry, for the past seven years. Wellcentive has been used for a variety of functions for both PCP practices and the ACO reporting, allowing for patient outreach, alerting to patients' gaps in care, performance reports and providing supplemental information to various health plans. Wellcentive is being replaced during 2019 with an anticipated end date of Tuesday, Dec. 31.

The new replacement system, HealthEC, will provide the previous functionality provided by Wellcentive and Crimson, previous MSSP data tool, while providing the ACO a single, integrated, administrative claims and clinical analytics and registry solution. Expect to see benefits from this solution in Medical Director visits in 2019 and in pay-for-performance programs in 2020. As part of this change, all existing practices connections to our Wellcentive today will be transitioned to HealthEC by Wednesday, Jan. 1, 2020. Additional PCPs participating in MSSP and PGIP will also be connected.

Lastly, the ACO will begin visiting practices using eClinicalWorks to provide initial education and then ongoing support in order to document correctly to close patient quality gaps in pay for performance programs.
